Table S1: Three-year disease-free survival, cancer-specific survival and overall survival rates (univariate analysis)

| Characteristics | $n$ | Disease-free <br> survival rate, <br> $\mathbf{\%}(\mathbf{9 5 \%} \mathbf{C I})$ | $P$ | Cancer-specific <br> survival rate, <br> $\mathbf{\%}(\mathbf{9 5 \%} \mathbf{C I})$ | $P$ | Overall <br> survival rate, <br> $\boldsymbol{\%}(\mathbf{9 5 \%} \mathbf{C I})$ | $P$ |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Age $\leq \mathbf{6 5}$ years | 582 | $88(85-92)$ |  | $95(93-97)$ | $90(88-94)$ |  |  |
| $\mathbf{6 5}$ years $<$ Age $\leq \mathbf{8 0}$ years | 526 | $80(75-84)$ |  | $90(87-94)$ | $82(78-86)$ |  |  |
| Age $>\mathbf{8 0}$ years | 120 | $82(72-92)$ | $<0.001$ | $82(73-93)$ | $<0.001$ | $70(59-84)$ | $<0.001$ |
