

Supplementary

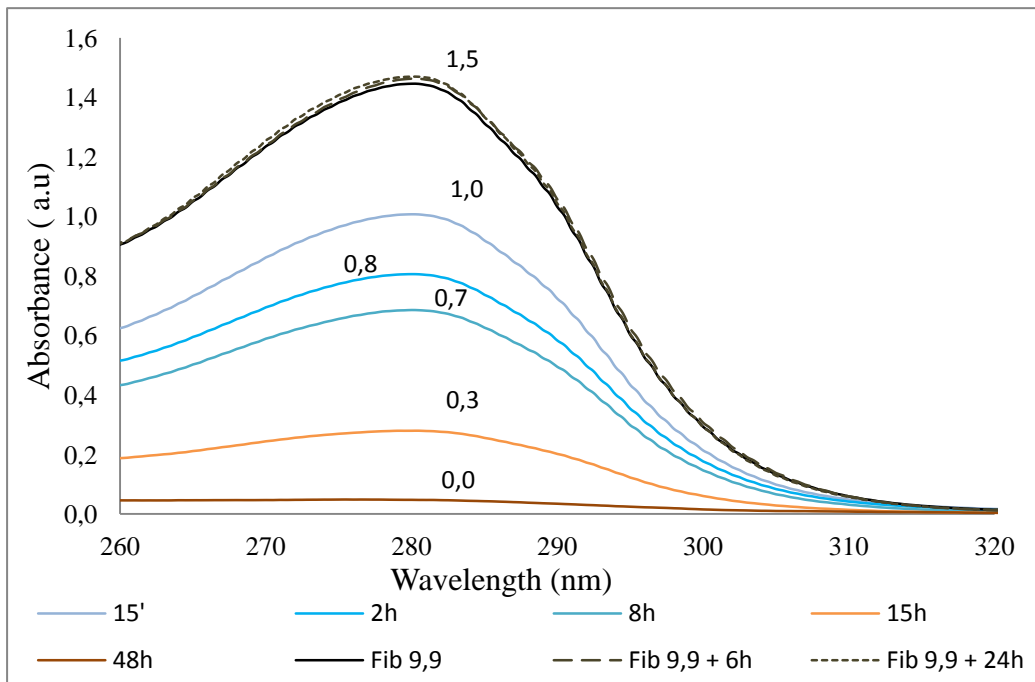

Figure SI-1: Evolution of absorbance spectra of supernatant solution as a function of 92 S6 P123 glass soaking time: 15 min (1.0), 2h (0.8), 8h (0.7), 15h (0.3) and 48 h (0.0). The absorbance spectra of fibrinogen solution at the same pH that the supernatant solution (9,9) at different times: 0, 6 h and 24 h are also presented (1,5).

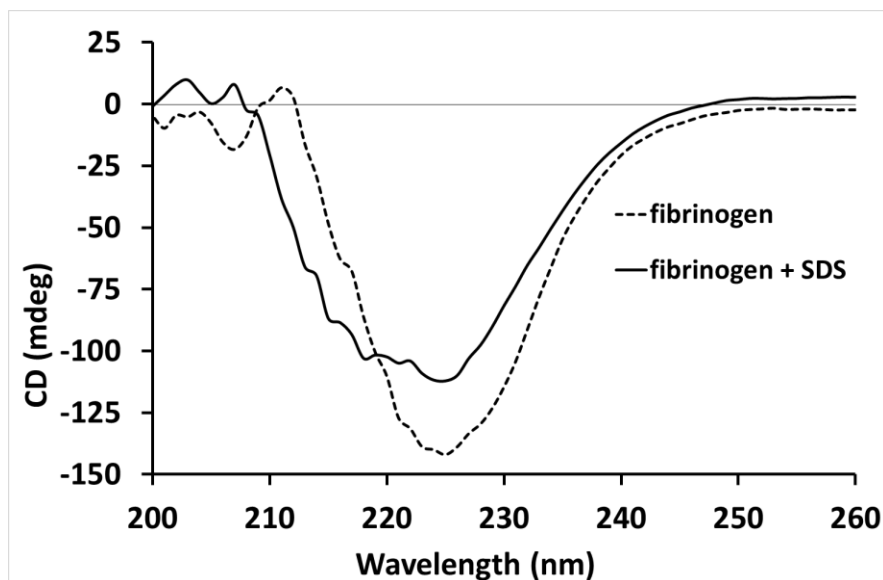

Figure SI-2: CD spectra of fibrinogen in saline solution at 37°C without (---) or with (—) Sodium Dodecyl Sulfate (50 mM).
